Question: 187

What is a logic gate in electronics and computer science?

- A. A logic gate usually takes in 2 inputs and gives out 1 output. The inputs and outputs are binary values, meaning they can be both 1 and 0.**
- B. A logic gate usually takes in 3 inputs and gives out 2 output. The inputs and outputs are binary values, meaning they can be 1 or 0.**
- C. A logic gate usually takes in 2 inputs and gives out 6 output. The inputs and outputs are binary values, meaning they can be both 1 and 0.**
- D. A logic gate usually takes in 2 inputs and gives out 1 output. The inputs and outputs are binary values, meaning they can be 1 or 0.**

Answer: D

A logic gate usually takes in 2 inputs and gives out 1 output. The inputs and outputs are binary values, meaning they can be 1 or 0. A XOR logic gate takes in 2 binary inputs and gives out a high output ONLY when the inputs are different. Meaning, if A and B are inputted to a XOR gate then the out C will be 1 ONLY when A is not equal to B. Reference: <https://blockgeeks.com/guides/cryptocurrencies-cryptography/>

Question: 188

Ethereum is considered to be a _____ type of blockchain.

- A. Permissionless**
- B. Permission Based**
- C. Hybrid**
- D. Private**

Answer: A

Permissionless – anyone can join Anyone can run a node, run mining software/hardware, access a wallet and write data onto and transact within the blockchain (as long as they follow the rules of the bitcoin blockchain). There is no way to censor anyone, ever, on the permissionless bitcoin blockchain.

Question: 189

Your company working for is now considering the blockchain. They would like to perform a POC with R3 Corda. The CIO was reading about different blockchain consensus algos and would like to understand what type of consensus algos is used with Corda.

What is the best answer?

- A. R3 Corda is a pluggable blockchain and allows the enterprise flexibility**
- B. R3 Corda is a byzantine fault tolerant blockchain**
- C. R3 Corda is a proof of stake based blockchain**
- D. R3 Corda is a proof of work based blockchain**

Answer: A

Corda does not share the same requirements as Bitcoin: we require absolute certainty over transaction finality and we need to know who our counterparts are.

So we had the freedom – and took this opportunity – to solve the consensus problem in a different way. In particular, Corda solves the privacy issue in a number of manners, primarily by allowing for separation of consensus into a service which we call the Notary Cluster. Corda was designed for business from the start. It has no cryptocurrency built into the platform and does not require mining-style consensus, which imposes great cost with little business benefit.

Question: 190

Your customer is an enterprise that is focused on financial sectors. What type of blockchain would this customer likely want specified for their enterprise?

- A. Permissionless**
- B. Decentralized**
- C. Hybrid**
- D. Permissioned**

Answer: D

Sometimes referred to as "private" blockchains, you are required to have some sort of permission to access any or parts of that blockchain. There are a multitude of variants and hybrid permissioned/permissionless blockchains that exist.

Question: 191

Which of the following is the metaphor that describes a logical dilemma that plagues many computer networks?

- A. Neo Generals' problem**
- B. Byzantine Generals' problem**
- C. Byzantine Admirals' problem**
- D. Renaissance Generals' problem**

Answer: B

BFT is so-named because it represents a solution to the "Byzantine generals' problem," a logical dilemma that researchers Leslie Lamport, Robert Shostak and Marshall Pease described in an academic paper published in 1982

Question: 192

The key difference between encryption and hashing is that encrypted strings can be reversed back into their original decrypted form if you have the right key?

- A. TRUE**
- B. FALSE**

Answer: A

Reference: <https://www.securityinnovationeurope.com/blog/page/whats-the-difference-between-hashing-and-encrypting>

Question: 193

A _____ cipher basically means it is using a fixed key which replaces the message with a pseudorandom string of characters. It is basically the encryption of each letter one at a time.

What is the cipher type?

- A. Stream**
- B. Block**
- C. Parallel**
- D. RSA**

Answer: A

Stream cipher basically means using a fixed key which replaces the message with a pseudorandom string of characters. It is basically the encryption of each letter one at a time.

Question: 194

You currently using the Metamask Chrome plugin and you see a selection for Etherscan in the plugin.

What is Etherscan used for?

- A. A search engine that allows users to easily lookup, confirm and validate transaction that have taken place on the Ethereum Blockchain**
- B. A search engine that allows users to easily lookup, confirm and validate transaction that have taken place on the Bitcoin Blockchain**
- C. A search engine that allows users to easily lookup, confirm and validate transaction that have taken place on the Ethereum and Tokens Blockchain**
- D. A search engine that allows users to easily lookup, confirm and validate transaction that have taken place on any Blockchain**

Answer: A

A search engine that allows users to easily lookup, confirm and validate transactions that have taken place on the Ethereum Blockchain

Question: 195

What are two challenges with using a Proof of Work algorithm? (Select two.)

- A. Mining pools not allowed**
- B. Difficulty rate goes down every year.**
- C. Expensive**
- D. Power Intensive**

Answer: CD

Reference: <http://www.hl.co.uk/news/2018/2/16/a-brief-history-of-blockchain-technology-everyone-should-read>

Question: 196

How many satoshis are in 1 bitcoin and how many wei in an Ether? (Select two.)

- A. 1,000,000,000,000,000**
- B. 1,000,000,000,000,000**
- C. 1,000,000,000**
- D. 10,000**
- E. 1,000,000,000,000**

Answer: AB

Reference: <http://www.btcsatoshi.com/> <http://ethdocs.org/en/latest/ether.html>

Question: 197

In the Proof of Stake(POS) algorithm the miners are really known as _____?

- A. Notary
- B. Oracle
- C. Forgers
- D. Minters

Answer: C

Proof of Stake has the same goal as proof of work""to validate transactions and achieve consensus in the chain""and it uses an algorithm but with a different process. With proof of stake, the creator of a new block "is chosen in a deterministic way, depending on its wealth, also defined as a stake." Since in a proof of stake system, there is no block reward, but the miners, known as forgers, get the transaction fees. Proponents of this shift, including Ethereum cofounder

Buterin, like proof of stake for the energy and cost savings realized to get to a distributed form of consensus.

Question: 198

A Byzantine failure is the loss of a system service due to a Byzantine fault in systems that requires_____. What is required?

- A. Consensus
- B. Cryptography
- C. Bandwidth
- D. Availability

Answer: A

A Byzantine failure is the loss of a system service due to a Byzantine fault in systems that require consensus.

Reference: [https://en.wikipedia.org/wiki/](https://en.wikipedia.org/wiki/Byzantine_fault_tolerance)

Byzantine_fault_tolerance

Question: 199

SHA-1 is the most commonly used SHA algorithm, and produces a _____-byte hash value(size).

- A. 256
- B. 128
- C. 32
- D. 20

Answer: D

SHA-1 is the most commonly used SHA algorithm, and produces a 20-byte hash value.

Reference: <https://www.securityinnovationeurope.com/blog/page/whats-the-difference-between-hashing-and-encrypting>

Question: 200

What type of attack would be considered a very large flaw in public blockchains such as Bitcoin's Blockchain

where the majority of hashpower could possibly be controlled thru an attack?
What is the specific attack Bitcoin could be exposed to?

- A. 51% Attacks**
- B. Tether Token Hack**
- C. DDoS Attack**
- D. BIP attack**
- E. Parity Wallet Attack**

Answer: A

SAMPLE QUESTIONS

*These questions are for demo purpose only. **Full version** is up to date and contains actual questions and answers.*

Killexams.com is an online platform that offers a wide range of services related to certification exam preparation. The platform provides actual questions, exam dumps, and practice tests to help individuals prepare for various certification exams with confidence. Here are some key features and services offered by Killexams.com:

Actual Exam Questions: *Killexams.com provides actual exam questions that are experienced in test centers. These questions are updated regularly to ensure they are up-to-date and relevant to the latest exam syllabus. By studying these actual questions, candidates can familiarize themselves with the content and format of the real exam.*

Exam Dumps: *Killexams.com offers exam dumps in PDF format. These dumps contain a comprehensive collection of questions and answers that cover the exam topics. By using these dumps, candidates can enhance their knowledge and improve their chances of success in the certification exam.*

Practice Tests: *Killexams.com provides practice tests through their desktop VCE exam simulator and online test engine. These practice tests simulate the real exam environment and help candidates assess their readiness for the actual exam. The practice tests cover a wide range of questions and enable candidates to identify their strengths and weaknesses.*

Guaranteed Success: *Killexams.com offers a success guarantee with their exam dumps. They claim that by using their materials, candidates will pass their exams on the first attempt or they will refund the purchase price. This guarantee provides assurance and confidence to individuals preparing for certification exams.*

Updated Content: *Killexams.com regularly updates its question bank and exam dumps to ensure that they are current and reflect the latest changes in the exam syllabus. This helps candidates stay up-to-date with the exam content and increases their chances of success.*

Technical Support: *Killexams.com provides free 24x7 technical support to assist candidates with any queries or issues they may encounter while using their services. Their certified experts are available to provide guidance and help candidates throughout their exam preparation journey.*
